Abstract

Apparatus for the disinfection of an air conditioning installation of a stationary air conditioning system for a building

An apparatus for the disinfection of an air conditioning installation of stationary air conditioning system for a building or a room has an injection device (3, 11, 14) for the accurate ejection of a defined quantity of an antibacterial active substance onto an evaporator (1) of the air conditioning installation. The apparatus comprises, furthermore, a control device (18, 19) for controlling the ejection times of the injection device in the automated repetition mode.
